

# Multipurpose Poles

DesignPole offers pre-stressed concrete poles that are spun-cast with natural aggregates and then polished into a marble-like column. Our poles are naturally graffiti-resistant and tape-resistant. The Multipurpose Poles are very durable and have the highest EPA and wind load ratings for concrete poles. Due to the strength of DesignPole, many components and fixtures can be applied to one single pole. DesignPole products are versatile and resemble high-end terrazzo or limestone. Base mounted or embedded (direct burial) installations are available and can also accommodate mast arms, post top arms, or side mounted lighting fixtures.
